INTRODUCTION

The Nevada Employment Security Department regularly conducts occupational employment surveys through the Occupational Employment Statistics (OES) program. The surveys are designed to provide economists, labor analysts, educational planners, and others with current industry occupational data and employment projections to better evaluate local, state, and national planning needs.

This report presents the occupational profile of selected educational services in Nevada as of April 1978.[1] This is the first survey of these educational services under the OES program. Separated by industry group and area, the tables provide occupational employment estimates and the percentage distribution of each occupation.

A number of factors must be considered when interpreting the results of this survey. To be publishable, each occupational estimate had to be at least 10; otherwise, the occupation was placed in an "All Other" category. All estimates were rounded to the nearest 10, and the percentage distributions, which were computed from unrounded data, were rounded to the nearest tenth of a percent. Therefore, the detail may not add to the total in some cases.

Further information regarding the methodology used in the survey can be found in the last section of this report.

---

[1] Libraries and information centers which are grouped under educational services were included in the OES survey of Local, State and Federal Government, and thus were excluded from this survey.

Characteristics of Selected Educational Services
(SIC* 82, less 823)

Establishments were surveyed from four of the five detailed groups within the major group entitled Educational Services (SIC 82). Libraries and information centers (SIC 823) were not surveyed; however, occupational data from libraries and information centers that are part of a broader educational service (e.g. university) are included.

The included detailed groups were elementary and secondary schools (SIC 821); colleges, universities, professional schools, and junior colleges (SIC 822); correspondence schools and vocational schools (SIC 824); and schools and educational services, not elsewhere classified (SIC 829).

SIC 821 consists of institutions below the university level (ordinarily grades 1 through 12) including denominational and sectarian, as well as kindergartens and military academies. SIC 822 includes those establishments requiring for admission at least a high school diploma or equivalent general academic training that grant academic degrees, or associate academic degrees, certificates or diplomas. SIC 824 is composed of establishments engaged in furnishing educational courses by mail; those offering data processing courses in programming and in computer and peripheral equipment operation; those offering courses in business machines operation, office procedures and secretarial and stenographic skills; or those offering other specialized trade or commercial courses. SIC 829 includes specialized nondegree granting schools, not elsewhere classified, such as music schools, dramatic schools, language schools, and short term examination preparatory schools.

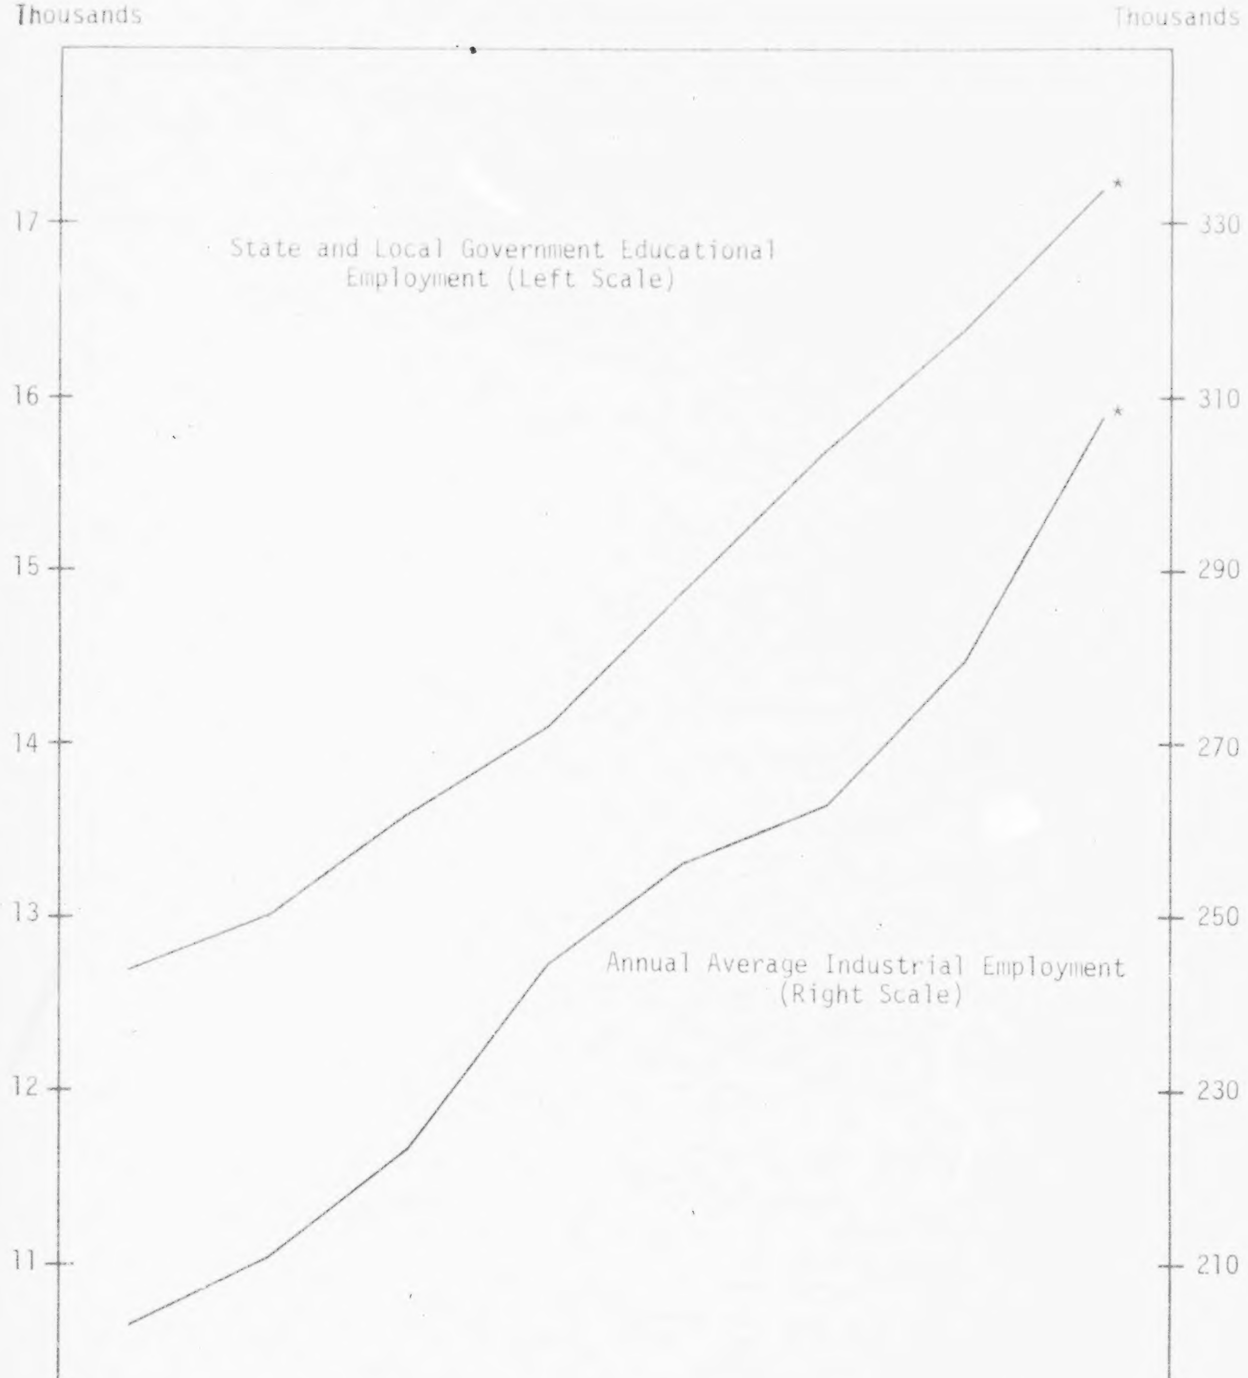
Annual Average Industrial Employment and State and Local Government Educational Employment 1970 - 1977



*(1977 - preliminary estimate)

Employment Trends - Selected Educational Services
(1970-1977)

Complete Unemployment Insurance coverage for many public and private educational services is lacking and consequently historical employment data for SIC 82 is not available. However, accurate estimates of employment in state and local government education have been maintained and can be used to present a reliable representation of trends.[2]

Although tables 1 through 3 identify strong growth in the educational sector throughout the State, they also point up the fact that the relative economic significance of jobs in education is declining. In each case, area educational employment growth failed to keep pace with the gains in total industrial employment. In part, this is due to the rapid economic development the State has experienced. This drift also appears consistent with the social and demographic changes that have been occurring, particularly the aging of the population and the fact that many new jobs are being filled by persons without school-age dependents or spouses seeking a second family income. Offsetting these trends somewhat is an emerging demand by adults for continuing education programs, as evidenced by the expansion of the community college system. Community colleges as well as trade, vocational, and other specialized schools are now fulfilling needs that were, at one time, unmet.

Nevertheless, a growth paradox does exist in most of the State. While the increase in educational jobs has fallen behind overall job expansion, it has outpaced population growth in both SMSA's and in the State as a

---

[2] Judging from the results of the survey, nongovernmental educational services employment comprises less than 6 percent of total educational services employment.

Note: Educational employment included some community college employment outside of the Reno SMSA. 1976 and 1977 employment figures were adjusted to reflect this situation. Actual employment was 5,500 and 5,600 respectively.

whole. Measured in government educational jobs per thousand population, a gain of over 4.5 percent is evident statewide. In Las Vegas, the increase was nearly 6 percent, while Reno grew by better than 5 percent.

Following are tables and graphs which identify the staffing patterns of the educational services industries. The composite distribution of selected educational services is followed by estimates for SIC's 821 and 822 for each reported geographical area. Also included are graphs which show the statewide broad occupational groupings of SIC's 824 and 829, for which insufficient data existed to detail specific occupations. Predictably, the tables reveal that the lion's share of educational employment is in professional occupations. Clerical and service occupations are also significant, and the combination of these three job categories comprise more than 85 percent of total educational services employment.

STATISTICAL CLERKS
SWITCHBOARD OPERATORS
CLERICAL SUPERVISORS
SALES CLERKS

Note: The "All Other" categories in the detailed 3 digit industries may include some occupations which are identified in the major 2 digit industry group.

METHODOLOGY

The Survey

The occupational data were developed from a universe survey of educational establishments located within the State of Nevada. The list of schools was compiled from a variety of sources including the ES 202 report; State Department of Education listings of public, private, and church affiliated schools; the Nevada Commission on Postsecondary Institutional Authorization register of licensed private postsecondary institutions; and local telephone directories. Every effort was made to insure that all appropriate institutions were surveyed. The universe consisted of 171 establishments (school districts were counted as one establishment). Of that total, 53 were either out of business or had no employees at the time of the survey; therefore 118 usable responses were received. Since benchmarks were not available for all institutions, the reported employment was used for this purpose. Table 14 details the universe size and the usable response from each detailed group (three digit SIC).

Collection Procedures

Most of the survey data were collected through mailed questionnaires to employers, with a follow-up sent to initial nonrespondents. The telephone was used to clarify responses and to contact all mail-out nonrespondents.

The Estimating Procedure

Estimates were generated for the Las Vegas SMSA, the Reno SMSA, and the balance of state by detailed industry groups (three digit SIC). To determine final occupational breakdowns for each industry group within each area, all associated establishment responses were summed.

Using roll-up programs, the detailed industries were aggregated to form the major industry group (two digit SIC) at the area level; the area estimates were combined to form state totals at the three digit level; and the area and three digit breakdowns were consolidated to construct a state by two digit industry profile. The criteria for publication, which were identified in the introduction, apply to any level of aggregation of the estimates.

Sampling and Nonsampling Error

Because the occupational tables were developed through a complete response to an apparent universe survey, no sampling error is identifiable. However, the survey was subject to nonsampling error. Nonsampling error results from incorrect responses, ineffective processing techniques, computational errors, etc. Although every effort was exercised to control these problems, the possibility still exists that they could affect the accuracy of the estimates.

60 OES NONMANUFACTURING SURVEY SAMPLE AND RESPONSE.............. 155

INTRODUCTION

The Nevada Employment Security Department, in cooperation with the U.S. Department of Labor, regularly conducts occupational employment surveys through the Occupational Employment Statistics (OES) program. The surveys are designed to provide economists, labor analysts, educational planners, and others with current occupational employment by industry. These data are also used to develop occupational projections to better evaluate local, state, and national planning needs.

This report presents employment by occupation in selected nonmanufacturing industries in Nevada and the Las Vegas and Reno Standard Metropolitan Statistical Areas (SMSA's) as of April, May, or June, 1978. This is the third survey of nonmanufacturing since the implementation of OES in 1970. Separated by detailed industry group, the occupational tables provide employment estimates, the statistical reliability of each estimate, and the percentage distribution of each occupation.

A number of factors must be considered when interpreting the results of this survey. Three criteria were met for publication: each occupational estimate had to be at least 10; at least three firms had to contribute to each estimate; and the relative error of each estimate could not exceed 40 percent. Occupations that did not meet all of the criteria were placed in an "All Other" category. In addition, estimates were rounded to the nearest 10, relative errors were rounded to the nearest percentage point, and percentage distributions were rounded to the nearest tenth of a percent. Therefore, the detail may not add to the total in some cases.

Further information regarding the methodology used in the survey can be found in the last section of this report.

CHARACTERISTICS OF SELECTED NONMANUFACTURING INDUSTRIES
(SIC's 10-14; 15-17; 60-67; 70-89, less 806, 82, and 88)

Three complete Standard Industrial Classification (SIC) industry divisions - mining, construction, and finance/insurance/real estate - and most of the services division were included in the nonmanufacturing survey.

The mining industry (SIC's 10-14) encompasses all establishments engaged in the extraction of minerals occurring naturely: solids, liquids, and gases. The term "mining" is also used to include quarrying, well operation, milling and other preparation done as a part of mining activity. Also included are the exploration and development of mineral properties and associated services performed on a contract, fee or similar basis. The division is composed of five major groups: metal mining (SIC 10), anthracite mining (SIC 11); bituminous coal and liqnite mining (SIC 12); oil and gas extraction (SIC 13); and mining and quarrying of nonmetallic minerals, except fuels (SIC 14).

The construction industry (SIC's 15-17) contains establishments primarily engaged in new work and additions, alterations or repairs to structures. Construction activities are generally administered from a relatively fixed place of business, but the actual work is performed at one or more different sites which may be dispersed geographically. Three groups of construction activity are covered: building construction by general contractors or operative builders (SIC 15); other construction by general builders (SIC 16); and construction by special trade contractors (SIC 17).

The finance/insurance/real estate industry (SIC's 60-67) includes establishments primarily operating in those fields. The division consists of banking (SIC 60); credit agencies other than banks (SIC 61); security and commodity brokers, dealers, exchanges, and service (SIC 62); insurance (SIC 63); insurance agents, brokers, and service (SIC 64); real estate (SIC 65); combinations of real estate, insurance, loans, and law offices (SIC 66); and holding and other investment offices (SIC 67).

The services industry (SIC 70-89) is composed of establishments that provide a wide variety of support to individuals, businesses, government establishments, and other organizations. Thirteen of the 15 major groups comprising the services division were included in the nonmanufacturing survey: hotels and other lodging places (SIC 70); personal services (SIC 72); business services (SIC 73); automotive repair, services, and garages (SIC 75); miscellaneous repair services (SIC 76); motion pictures (SIC 78); other amusement and recreation services (SIC 79); health services (SIC 80); legal services (SIC 81); social services (SIC 83); museums, art galleries, botanical and zoological gardens (SIC 84); membership organizations (SIC 86); and miscellaneous services (SIC 89). The hospitals (SIC 806) section of health services and educational services (SIC 82) have previously been surveyed separately, while a survey of private household (SIC 88) employers is impractical.

NEVADA

EMPLOYMENT TRENDS - SELECTED NONMANUFACTURING INDUSTRIES (1970-1978)

Table 1 identifies the growth pattern in the surveyed nonmanufacturing industries since 1970 as compared to other growth indicators in the State. In general, the trend has been one of rapid expansion with a brief lull during the 1974-75 recession. Jobs in these industries have far outpaced the increase in population. At the same time, the overall growth rate has been slightly above that of total nonagricultural employment, most of the difference having occured in the last two years.

A more definitive look at the behavior of the surveyed industries is undertaken in each industry's respective section. A brief discussion of each major group (2 digit SIC) for which occupational data is publishable is also included. Three digit SIC information is available for some industries within each of the geographic areas presented in this report. If desired, this data may be obtained by contacting Employment Security Research at the address shown on the title page.

TABLE 1

STATE OF NEVADA
POPULATION, NONAGRICULTURAL EMPLOYMENT, AND SELECTED NONMANUFACTURING INDUSTRY* EMPLOYMENT
(1970-1978)

	Population	Total Nonagricultural Employment	Total Selected Non-Manufacturing Industries	Percentage of Total Nonagricultural Employment
1970	488,700	203,000	105,000	51.7%
1971	510,200	210,600	109,300	51.9%
1972	527,400	223,400	115,800	51.8%
1973	551,900	244,600	127,700	52.2%
1974	574,000	256,100	134,100	52.4%
1975	590,300	263,100	136,800	52.0%
1976	612,700	279,800	145,900	52.1%

1978	677,800	349,900	190,200	54.4%
Percentage Change 1970-1978	38.7%	72.4%	81.1%	--
Annual Average Growth	4.2%	7.0%	7.7%	--

* Includes mining; construction; finance/insurance/real estate; and services (excluding government services).

NOTE: Population and nonagricultural employment figures are rounded to the nearest 100.

SOURCE: Population estimates provided by State Planning Coordinator's Office.

NEVADA

EMPLOYMENT TRENDS AND OVERVIEW - MINING

Historically, the mining industry has been an important part of Nevada's economy, and was, in fact, primarily responsible for Nevada's admittance as a State during the Civil War. However, since the legalization of gaming and other developments during the 1930's, the role of the mining industry has faded more and more into the background. Nonetheless, mining still remains vital to the economies of several rural counties in the State.

Table 2 highlights the continuing decline in importance of Nevada's mining industry throughout the seventies. The total change in employment has been negligible, although employment on an annual basis has been as high as 4,400 and as low as 3,500. However, this stagnation coupled with the explosive growth in other industries has cut mining's share of nonagricultural employment almost in half.

Despite the suspected presence of enormous mineral resources throughout the State, this potential continues to be underutilized. As the table indicates, most other mountain states of the West have been exploiting their mineral wealth to a far greater degree than Nevada. This is not surprising in light of the various environmental and logistical problems involved in mining development and because Nevada's economy has been prospering without major contributions from the mining sector.

The future of the mining industry is clouded. On one hand, the apparent determination of the United States to become more self-reliant in the area of natural resources has opened the door to future development. On the other, fundamental questions such as the availability and allocation of scarce water resources and the desire to preserve wilderness have left prospects in doubt.

On the following pages is information on Nevada's most significant mining industries.

TABLE 2

COMPARISON OF MINING EMPLOYMENT IN THE UNITED STATES AND SELECTED WESTERN STATES
(1970 and 1978)

	1970		1978		1970-1978
	Total Mining Employment (In Thousands)	Percent of Total Nonagricultural Employment	Total Mining Employment (In Thousands)	Percent of Total Nonagricultural Employment	Annual Average Percentage Change in Mining Employment
United States	623.0	0.9%	837.0	1.0%	3.8%
Arizona	20.6	3.8%	19.3	-2.2%	-0.8%
Colorado	14.0	1.9%	27.3	2.4%	8.7%
Idaho	3.5	1.7%	3.8	1.2%	1.0%
Montana	6.6	3.2%	6.9	2.5%	0.6%
New Mexico	17.0	5.8%	24.8	5.5%	4.7%
Utah	12.7	1.3%	15.6	3.0%	2.8%
Wyoming	11.5	10.6%	28.9	15.[illegible]%	12.2%
Nevada	3.1	2.0%	3.1	1.2%	0.0%

SIC 10 - METAL MINING

This major group includes establishments primarily in mining, developing mines, or exploring for metallic minerals (ores). The group also includes all ore dressing and beneficiating operations, whether performed at mills operated in conjunction with the mines served or at mills operated separately.

Wage and Salary Employment 1970 to 1978
in Nevada and the SMSA's
(SIC 10)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1970	3,201	-	133	-	26	-
1971	2,835	-11.4%	152	14.3%	25	- 3.8%
1972	2,634	- 7.1%	125	-17.8%	12	-52.0%
1973	2,701	2.5%	119	- 4.8%	14	16.7%
1974	3,109	15.1%	148	24.4%	24	71.4%
1975	3,057	- 1.7%	229	54.7%	48	100.0%
1976	2,445	-20.0%	272	18.8%	14	-70.8%
1977	2,928	19.8%	438	61.0%	44	214.3%
1978	2,411	-17.7%	387	-11.6%	75	70.5%

The above table highlights two facets of the metal mining industry in the State. The first is the insignificance of the industry in Nevada's two major urban areas. The second is the volatility of the industry in general, which has been primarily due to the changing fortunes of the copper industry. In fact, copper mining employment (SIC 1021) now ranks third to employment in metal mining services (SIC 1081) and the mining of gold ores (SIC 1041).

On the next page are graphs depicting the Statewide employment trend of the metal mining industry, as well as its broad occupational structure. Following that is a table showing the detailed occupational staffing pattern of the industry.

SIC 14 - MINING AND QUARRYING OF NONMETALLIC MINERALS (EXCEPT FUELS)

Included in SIC 14 are establishments primarily engaged in mining or quarrying, developing mines, or exploring for nonmetallic minerals, except fuels. Also included are certain well and brine operations, and primary preparation plants, such as those engaged in crushing, grinding, washing, or other treatment.

Wage and Salary Employment* 1970 to 1978

1975	1,346	14.1%	118	4.4%	233	65.2%
1976	1,274	- 5.3%	112	- 5.1%	167	-28.3%
1977	1,415	11.1%	124	10.7%	132	-21.0%
1978	1,794	26.8%	177	42.7%	138	4.5%

* Figures include employment in the oil and gas extraction industry (SIC 13).

An analysis of employment in SIC 14 based on the above table is somewhat difficult because of the inclusion of SIC 13. In general, however, nonmetallic minerals mining has evidenced a much more stable pattern than metal mining. The decade has provided moderate growth for the industry, particularly in the nonmetropolitan areas of the State. Employment in SIC 14 is concentrated in bentonite mining (SIC 1452); other clay, ceramic, and refractory minerals mining (SIC 1459); and barite mining (SIC 1472).

Graphs of the employment trend and occupational structure as well as a table depicting State staffing in SIC 14 follow.

NEVADA

EMPLOYMENT TRENDS AND OVERVIEW - CONSTRUCTION

As is probably true throughout the United States, construction can probably be best described as Nevada's "boom and bust" industry. While overall employment growth in Nevada has been continuous for thirty years, though at varying rates, construction employment has fluctuated significantly. At times this has coincided with periods of national recession or growth, while on other occasions general expansion or contraction has been unique to Nevada. The most recent construction downturn occured during the 1974-75 national recession, with an approximate job loss of 33 percent. However, since the low point in 1975, explosive expansion has more than doubled the number of jobs in the industry.

Table 5 shows the trends in construction employment over the past eight years in various western states and the nation. A definitive analysis is impossible because the table's data do not take into account the particular stage in the construction cycle represented by the fixed years. However, it appears that Nevada's construction industry is pretty typical of the pattern in the western states; and, not surprisingly, the percentage of construction jobs in this State is far higher than in the United States as a whole, where growth has been very slow on average.

Looking into the future, the construction industry should pretty much match its past record. The long term trend should be one of continuing growth with intervening periods of substantial fluctuation. A major Defense Department project that has been proposed for four western states, including Nevada, could alter the outlook for the Nevada construction industry considerably in the 1980's. However, since no final decisions have been reached as to if, when, or where it will be built, any speculation on its impact is meaningless.

Data on the construction industry for Nevada, Las Vegas, and Reno are presented on the following pages.

TABLE 5

COMPARISON OF CONSTRUCTION EMPLOYMENT IN THE UNITED STATES AND SELECTED WESTERN STATES (1970 and 1978)

	1970		1978		1970-1978

* Break in series - approximately 330 jobs gained Statewide due to recoding in first quarter, 1975.

The seventies have brought continuing growth to the building construction industry. The period has been marked by significant swings in activity with a major curtailment during 1974-75, coincidental with the national recession. It is interesting to note that the building slowdown and recovery in Reno tended to precede the same cycle in Las Vegas, although this may be due in part to a greater volatility in southern Nevada building. Almost half of the employment in SIC 15 is in the construction of single-family houses (SIC 1521). The remainder of employment is distributed among the four other detailed industries comprising the major group.

The next page contains graphs detailing the trend in employment and the occupational structure of the industry Statewide. Following that are tables that show staffing patterns of the industry within the State.

1978	3,041	23.5%	1,000	12.4%	1,170	4.0%

* Break in series - approximately 170 jobs lost Statewide due to recoding in first quarter, 1975.

In general, employment in SIC 16 has suffered throughout the decade; a general declining trend is evident. Much of this is probably due to the diminishing funding for highway and related construction, improvement, and repair. It appears that Clark County (Las Vegas) has taken the brunt of this slowdown. Most employment in the major group is shared among three of the four detailed industries: highway and street construction (SIC 1611); bridge, tunnel, and elevated highway construction (SIC 1622); and heavy construction not elsewhere classified (SIC 1629).

On the upcoming pages are graphs and tables depicting the employment trend and occupational staffing of SIC 16.

* Break in series - approximately 170 job gained Statewide due to recoding in first quarter, 1975.

As would be expected, employment trends in special trade construction have been closely allied to that in SIC 15 (general building contractors). Over the eight years employment has increased rapidly, except during 1974-75 when a severe building recession was noted. Reno's employment growth has generally outpaced that in Las Vegas. Of the numerous detailed industries that comprise the major group; contractors speicalizing in plumbing, heating, and air conditioning (SIC 1711) and electrical work (SIC 1731) are the largest in terms of employment.

Graphs showing the employment trend and occupational structure, as well as tables identifying staffing patterns in selected industry groups and areas follow.

NEVADA

EMPLOYMENT TRENDS AND OVERVIEW - FINANCE, INSURANCE, AND REAL ESTATE (FIRE)

An analysis of long-term employment trends in the FIRE industry shows how the State of Nevada has matured in its growth and become a part of mainstream U.S.A. As late as 1940, this industry employed approximately one person for every 220 Nevadans compared to a 1:88 ratio throughout the United States. By 1978, this gap had closed to a point where approximately one FIRE job is generated for every 50 citizens both in Nevada and the Nation as a whole. Since the demand for FIRE services is pretty well attuned to family-oriented activities and views, it appears that Nevada life, at least in this respect, is not as atypical as often portrayed.

The accompanying table indicates the pattern of FIRE employment in the seventies. The major factor apparent is continuing solid growth. This is evident in both the national and the western states' employment figures. While FIRE employment growth in the western states has outpaced that in the United States, this can be almost totally explained by the much faster population rise in the West. Per capita demand for the services provided by the FIRE industry has also increased significantly during this time.

At least for the near term, FIRE employment should show little divergence from recent trends. The industry is virtually recession proof, even at the national level, where no year to year decline in employment has been experienced since World War II. Locally, the industry should continue to benefit from the State's large number of inmigrants. In the long run, this should become the prime determinant of industry growth, as the need for FIRE services levels out.

Following is analysis and data on specific FIRE industries.

TABLE 15

COMPARISON OF FINANCE, INSURANCE, AND REAL ESTATE (FIRE) EMPLOYMENT IN THE UNITED STATES AND SELECTED WESTERN STATES
(1970 and 1978)

	1970		1978		1970-1978
	Total FIRE Employment (In Thousands)	Percent of Total Nonagricultural Employment	Total FIRE Employment (In Thousands)	Percent of Total Nonagricultural Employment	Annual Average Percentage Change in FIRE Employment

SIC 60 - BANKING

This major group includes institutions which are engaged in deposit banking or closely related functions, including fiduciary activities.

Wage and Salary Employment 1970 to 1978
In Nevada and the SMSA's
(SIC 60)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1970	2,704	-	1,111	-	1,228	-
1971	2,824	4.4%	1,149	3.4%	1,311	6.8%
1972	3,093	9.5%	1,297	12.9%	1,427	8.8%
1973	3,410	10.2%	1,445	11.4%	1,568	9.9%
1974	3,560	4.4%	1,521	5.3%	1,632	4.1%
1975	3,570	0.3%	1,502	- 1.2%	1,653	1.3%
1976	3,768	5.5%	1,601	6.6%	1,730	4.7%
1977	4,141	9.9%	1,789	11.7%	1,875	8.4%
1978	4,437	7.1%	1,904	6.4%	2,055	9.6%

As the table indicates, the banking industry has experienced reasonably steady growth through the decade. The annual average increase has generally outpaced population growth, the prime determinant of demand for banking services, by about 2 percentage points per year. Almost 90 percent of the employment is concentrated in the two SMSA's. Although Las Vegas is twice as big as Reno, their employment totals are comparable, probably because most of the larger banks are headquartered in the smaller metropolitan area. Almost 75 percent of banking employment is in national banks that are members of the Federal Reserve System (SIC 6025).

The next page contains graphs detailing the employment trend and occupational structure of the industry, following which are tables identifying the occupational staffing of the major group in the State, Las Vegas, and Reno.

* Break in series - approximately 100 jobs gained Statewide due to recoding in first quarter, 1975.

Jobs in SIC 61 have increased significantly throughout the seventies. However, the trend has been marred by cyclical swings, effects that are caused by a phenomenon known by the cumbersome term "disintermediation." This occurs when withdrawals from "thrift" institutions exceed deposits over a significant period of time and are reinvested in higher yielding returns. Recent actions by the Federal Reserve Board have tried to alleviate this recurring problem. Almost all major group employment is located within the State's major urban areas. More than half is connected with various types of savings and loan associations (SIC 612).

Following are graphs and tables identifying the employment trend and staffing patterns in SIC 61.

SIC 63 - INSURANCE

SIC 63 includes insurance carriers of all types, including life, accident, health and medical service plans.

Wage and Salary Employment 1974 to 1978
In Nevada and the SMSA's
(SIC 63)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1974	477	-	169	-	259	-
1975	483	1.3%	221	30.8%	233	-10.0%
1976	520	7.7%	257	16.3%	233	0.0%
1977	629	21.0%	279	8.6%	298	27.9%
1978	817	29.9%	341	22.2%	415	39.3%

Employment by insurance carriers in Nevada remains small despite rapid growth in the past few years. Jobs are concentrated in the two SMSA's, with nearly 70 percent in firms primarily engaged in underwriting title insurance (SIC 6361). The only other significant detailed industries in Nevada are life insurance (SIC 6311) and hospital and medical service plans (SIC 6324).

The employment trend and occupational detail are shown in the following graphs and tables.

SIC 64 - INSURANCE AGENTS, BROKERS, AND SERVICE

This major group includes agents and brokers dealing in insurance, and also organizations offering services to insurance companies and to policyholders.

Wage and Salary Employment 1974 to 1978
in Nevada and the SMSA's
(SIC 64)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1974	1,424	-	623	-	708	-
1975	1,526	7.2%	619	-0.6%	803	13.4%
1976	1,619	6.1%	620	0.2%	881	9.7%
1977	1,797	11.0%	710	14.5%	946	7.4%
1978	1,932	7.5%	752	5.9%	1,007	6.4%

As is true of all major groups within the industry division, employment growth has been strong in the last several years. In the State as a whole, the industry has prospered through recessions as well as booms, although some stagnation had occurred in Reno for several years. As expected, industry employment in Reno and Las Vegas continues to be more than 90 percent of the State total.

Graphs and tables follow which identify the employment trend and staffing patterns in SIC 64.

* Break in series - approximately 130 jobs lost Statewide due to recoding in first quarter, 1975.

The analysis of wage and salary data is limited in scope since many persons involved with real estate work on a commission basis, and are not identified in the employment figures. Nevertheless, the wage and salary figures indicate that the real estate industry is subject to the same cyclical swings that have been noted in the construction industry and credit agencies. When the housing market is depressed, industry employment tends to decline; however, with Nevada's continuing growth, the gravity of the problem has probably been significantly less then elsewhere. Like most other industry groups with the FIRE division, most employment is in Las Vegas and Reno. The two largest major group employers are operators of apartment buildings (SIC 6513) and real estate agents and managers (SIC 6531).

Data about the Nevada real estate industry are presented on the upcoming pages.

NEVADA

EMPLOYMENT TRENDS AND OVERVIEW - SERVICES

The services industry has been the keystone of Nevada's economy for two decades, but employment growth has been phenomenal since the tail-end of the second World War. Many of the industry's jobs are "export" oriented in the sense that the demand originates outside of Nevada. At present much of the success of the State's economy has its roots in the services industry, particularly in the tourist related sectors.

Table 29 highlights the strong contribution to employment made by the services industry in this State. The percentage of employment in services is more than double that found elsewhere. Even in a highly tourist oriented state such as Florida (not shown on table) services employment comprises only 21 percent of nonagricultural jobs. While services share of jobs in Nevada is unusual, the recent growth pattern of the industry appears to be fairly typical when compared to other western states and the United States.

Contrary to popular belief, Nevada's services industry has been affected by national recessions. While this has not translated itself into a year to year employment drop, significant growth slowdowns have been noted. The possiblity of a national recession currently could dampen the industry's short-term prospects. More ominous, however, is the threat of ongoing energy shortages and/or high energy prices which could slow tourist activity considerably. This is especially true in light of the rapid hotel-casino expansion that has taken place in both Las Vegas and Reno in the past couple of years. Until the energy situation is resolved, the outlook for the industry is uncertain.

The most significant services industries are discussed on the upcoming pages.

TABLE 29

COMPARISON OF SERVICES EMPLOYMENT IN THE UNITED STATES AND SELECTED WESTERN STATES (1970 and 1978)

	1970		1978		1970-1978

* Break in series - approximately 250 jobs lost Statewide due to recoding in first quarter, 1975.

In terms of employment, SIC 70 remains the second largest major industry group in Nevada. Growth has been relatively moderate (except in 1978), but steady, in the decade. Employment is centered in Las Vegas; however, this has been changing slowly with the recent construction of several resort-type hotels in the Reno area. By a wide margin, most jobs are found in hotels, motels, and tourist courts (SIC 7011).

Following are tables and graphs which detail SIC 70 in the State and the two SMSA's.

SIC 72 - PERSONAL SERVICES

Establishments primarily engaged in providing services generally involving the care of the person or his/her apparel, such as laundries, dry cleaning plants, portrait photographic studios, and beauty and barber shops comprise this major group.

Wage and Salary Employment 1970 to 1978
In Nevada and the SMSA's

1978	4,620	11.5%	1,324	26.5%	2,850	6.5%

* Break in series - approximately 125 jobs lost Statewide due to recoding in first quarter, 1975.

Unlike most other industry groups in Nevada, personal services employment growth has been relatively small in the seventies. This has probably been due to less individual need for certain services. For example, the development of permanent press fabrics has undoubtedly reduced demand for laundry services. The largest single industry in the group is beauty shops (SIC 7231) with linen supply (SIC 7213) a close second. Approximately 60 percent of the employment is in the Las Vegas SMSA and another 30 percent is located in the Reno area.

On the following pages are graphs and tables describing employment trend and the occupational staffing within the major group.

1978	12,292	11.8%	2,312	-1.2%	6,389	15.0%

* Break in series - approximately 60 jobs gained Statewide due to recoding in first quarter, 1975.

Employment growth in SIC 73 has been minor in the decade, although it has been more rapid in the most recent years. Five different industries currently employ more than 1,000 persons: cleaning and maintenance services to buildings (SIC 7349); research and development laboratories (SIC 7391); management consulting, and public relations services (SIC 7392); detective agencies and protective services (SIC 7393); and business services not elsewhere classified (SIC 7399). Even though employment growth has been greatest in the Reno area, most employment is centered in the Las Vegas SMSA and one rural county (Nye) because of firms providing services at the Nevada Test Site.

Following are graphs and tables related to occupational trends in SIC 73.

* Break in series - approximately 40 jobs lost Statewide due to recoding in first quarter, 1975.

For the most part, SIC 75 employment has been upward and has nearly approximated population growth over the eight year period. Currently, more than 90 percent of the employment is located in the two major urban areas of Nevada. Automotive rental and leasing (SIC 7512) and general automotive repair shops (SIC 7538) are the two most prominent industries of the group, employing about one-half of the total.

The following pages contain graphical and tabular analysis of SIC 75.

1978	932	3.9%	251	2.0%	592	6.3%

Employment growth in SIC 76 was substantial in the early part of the decade, but has tapered off in recent years. Jobs in Las Vegas continue to number more than twice those in Reno, while the rural counties employ roughly 10 percent of the statewide total. Repair shops and related services not elsewhere classified (SIC 7699), which covers more than 80 types of repair services, is the largest detailed industry in terms of employment. Also important are radio and television repair shops (SIC 7622), refrigeration and air conditioning service and repair shops (SIC 7623), other electric and electronic repair shops (SIC 7629), and reupholstery and furniture repair (SIC 7641).

Graphs and tables detailing the employment trend and staffing patterns in SIC 76 are included on the upcoming pages.

* Break in series - approximately 3,400 jobs gained Statewide due to recoding in first quarter, 1975.

Among all industry groups in the State, SIC 79 is number one in employment. Although trends are somewhat distorted because of the break in series and the reclassification of certain firms between SIC's 70 and 79, there is little doubt that the seventies have been a period of significant growth for amusement and recreation services. Employment is currently divided among Las Vegas, Reno, and the Balance-of-State at approximately 45, 35, and 20 percent respectively. Amusement and recreation services not elsewhere classified (SIC 7999) is far and away the largest detailed industry in the group; this catch-all category includes gambling establishments, not primarily operating coin-operated machines, among many types of amusement and recreation services.

The next page contains graphs depicting the employment trend and the occupational structure of SIC 79. Following that are tables showing occupational staffing for the State, Reno, and Las Vegas.

SIC 80 - HEALTH SERVICES

The health services industry group includes establishments primarily engaged in furnishing medical, surgical, and related service to persons. Also included are associations or groups primarily engaged in providing health-related services to members.

Wage and Salary Employment 1970 to 1978
In Nevada and the SMSA's
(SIC 80)*

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1970	3,343	-	1,017	-	2,068	-
1971	3,764	12.6%	1,159	14.0%	2,321	12.2%
1972	4,525	20.2%	1,330	14.8%	2,847	22.7%
1973	5,254	16.1%	1,523	14.5%	3,361	18.1%
1974	5,916	12.6%	1,576	3.5%	3,896	15.9%
1975	6,512	10.1%	1,733	10.0%	4,299	10.3%
1976	7,278	11.8%	1,886	8.8%	4,831	12.4%
1977	8,053	10.6%	2,125	12.7%	5,233	8.3%
1978	8,924	10.8%	2,276	7.1%	5,881	12.4%

* Excludes private non-profit and government hospitals (SIC 806).

The health services industry has been one of the fastest growing in the State with an average annual growth of more than 12 percent. Various types of hospitals (SIC 806) have the largest share of the major group's employment, however they were not included in this occupational survey. The most significant health service industries surveyed were offices of physicians (SIC 8011), offices of dentists (SIC 8021), and skilled nursing care facilities (SIC 8051). About one-half of the employment in health services other than hospitals is in the Las Vegas area and another 35-40 percent is in Washoe County.

Selected data on the health services industry is presented on the next several pages.

SIC 81 - LEGAL SERVICES

SIC 81 includes firms engaged in offering legal advice or legal services, the heads of which are members of the bar.

Wage and Salary Employment 1970 to 1978
In Nevada and the SMSA's
(SIC 81)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1970	753	-	303	-	381	-
1971	828	10.0%	332	9.6%	413	8.4%
1972	880	6.3%	339	2.1%	456	10.4%
1973	954	8.4%	368	8.6%	493	8.1%
1974	1,029	7.9%	411	11.7%	522	5.9%
1975	1,132	10.0%	440	7.1%	580	11.1%
1976	1,262	11.5%	476	8.2%	653	12.6%
1977	1,423	12.8%	525	10.3%	740	13.3%
1978	1,548	8.8%	555	5.7%	823	11.2%

The seventies have been a period of sustained growth for the legal services industry. Employment has increased substantially in all areas with the Balance-of-State having the highest growth rate. Employment in each area is fairly well representative of that area's population share, although Reno has more relative employment than expected and Las Vegas and the rural counties have slightly less. The legal services group is comprised entirely of one detailed industry (SIC 8111) of the same name.

Employment patterns of SIC 81 are presented on the following pages.

SIC 83 - SOCIAL SERVICES

This major group includes establishments providing social and rehabilitation services to those persons with social or personal problems and to the handicapped and the disadvantaged. Also included are organizations soliciting funds to be used for these and related services.

Wage and Salary Employment 1975 to 1978
In Nevada and the SMSA's
(SIC 83)

	Nevada	Change from Prior Year	Reno	Change from Prior Year	Las Vegas	Change from Prior Year
1975	952	-	473	-	309	-
1976	1,165	22.4%	398	-15.9%	574	85.8%
1977	1,307	12.2%	438	10.1%	621	8.2%
1978	1,558	19.2%	484	10.5%	810	30.4%

SIC 83, which was pieced together from parts of a number of industries under the old coding system, has rapidly expanded employment in the past few years. Typically, about 50 percent of the jobs are in the Las Vegas area, and another 30 percent are in Reno. Individual and family social services (SIC 8321), child day care service (SIC 8351), and social services not elsewhere classified (SIC 8399) are the three most significant detailed industries in the group.

The following pages contain graphical and tabular data related to SIC 83.

1978	1,640	10.1%	591	3.5%	925	18.6%

* Break in series - approximately 550 jobs lost Statewide due to recoding in first quarter, 1975.

Despite losing many firms in the coding conversion, SIC 86 employment has shown a net gain since 1972. Employment tends to fluctuate because the division includes political organizations (SIC 8651) which blossom during major political campaigns. Currently, labor unions and similar labor organizations (SIC 8631) are the single biggest employers within the group. Ninety percent of the jobs are located in the Las Vegas and Reno areas.

Employment profiles of SIC 86 are included on the upcoming pages.

1978	3,814	12.7%	1,070	20.9%	2,096	12.7%

* Break in series - approximately 80 jobs lost Statewide due to recoding in first quarter, 1975.

With the exception of a lull during the 1974-75 economic slowdown, SIC 89 has registered steady employment gains in the seventies. Growth has been mostly due to population increases and at the same time to a greater individual demand for these types of services. The largest industry is engineering, architectural and surveying services (SIC 8911) which covers the majority of the major group's employment. Services related to the Nevada Test Site hold a major share of the jobs in Las Vegas and the Balance-of-State.

Graphical and tabular data about SIC 89 employment are included on the following pages.

METHODOLOGY

The Survey

The occupational estimates were developed from a sample of nonmanufacturing employers covered under the Nevada Unemployment Compensation Law. The sampling universe consisted of more than 10,000 firms employing nearly 180,000 workers. From this a sample of 3,666 firms with benchmark employment of 142,823 was drawn. Useable responses were received from 2,944 establishments or 80.3 percent; and total employment indicated by the respondents was 118,947 or 83.3 percent of the benchmark. Table 60 details the universe size and response from each survey group.

Collection Procedures

Most of the survey data were collected through mailed questionnaires to employers, with a follow-up sent to initial nonrespondents. Larger employers were surveyed through personal contacts. The telephone was used to clarify responses and to handle critical nonresponse areas.

The Estimating Procedure

Estimates were generated for the Las Vegas SMSA, the Reno SMSA, and the Balance-of-State, by detailed industry groups (three digit SIC). Estimates were developed by adjusting responses to the benchmark total to determine final occupational breakdowns for each industry group within each area.

The appropriate industry groups were than aggregated to form major industry group (two digit SIC) estimates; and the areas were added to construct State totals. The criteria for publication, which were identified in the introduction, apply to any level of aggregation of the estimates.

Relative Error (Sampling Error)

The relative error is a simplified measure of the precision of an estimate. The relative error translates the sampling error (in this case, nonresponse error) into percentage terms. It is expressed as a range above or below the estimate within which a complete universe response would fall approximately 68 percent of the time. For example, it is estimated that 120 managers and officers are employed in SIC 10 in Nevada. The relative error of 9 percent indicates that the chances are about 68 out of 100 that the true employment would fall within eleven jobs above or below the estimate. Likewise, the 4.4 percent of total employment would not differ by more than 0.4 percentage point.

Nonsampling Error

Although the survey has been designed to minimize nonsampling error, the possiblity still exists that it will affect the accuracy of the estimates. Nonsampling error results from incorrect responses, ineffective processing techniques, computational errors, etc. However, every effort was exercised to control these problems.
